

AMENDMENTS TO THE SPECIFICATION

The paragraph beginning on page 1, line 16, is being amended as follows:

A variety of processes for producing such color filter ~~array~~ arrays have been proposed. Among them, a so-called "color resist method" is in wide practical use. In the color resist method, the patterning is effected by exposing a photosensitive resin composition comprising colorants to light and developing, and the patterning is repeated in sequence in the required times.
